

Grades 6 and 7

SIX PHASES OF INSTRUCTION OVER TWO DAYS:

 Teachers set the stage by leading an introductory discussion that orients students to the context of the problem.

POSE A PROBLEM

Teachers introduce a mathematical way of thinking about the context and engage students in a preliminary approach that opens the door to the workshop phase.

မ္တီခ်ို workshop

The workshop starts with a more challenging and more open-ended extension of the problem. In teams, students plan and produce mathematical posters to communicate their work.

CEP

POST, SHARE, COMMENT

Teams display their posters in the classroom, get to know other teams' posters, and attach questions/comments by way of small adhesive notes (or similar).

STRATEGIC TEACHER-LED DISCUSSION

Teachers then compare, contrast, and connect several posters. In the process they highlight a progression from a more basic approach to a more generalizable one. By doing this, teachers emphasize standards-aligned mathematics using student-generated examples.

FOCUS PROBLEM: SAME CONCEPT IN A NEW CONTEXT

Serving as a check for understanding, this more focused problem gives teachers evidence of student understanding.

One of the most important things about really effective teaching is getting inside your students heads and understanding what they understand and building on that.

Dr. Alan Schoenfeld, University of California - Berkeley

Fully Designed Lessons Ideal for Diagnostic Teaching in Mathematics

Diagnostic teaching elicits what students do and do not understand, and then adjusts instruction accordingly. To support diagnostic teaching in mathematics, SERP developed a set of 12 "Poster Problems"– two-day lessons taught in six instructional phases. Lessons

are centered around engaging problem contexts that highlight critical mathematics concepts targeted by the Common Core State Standards. The problems are designed to elicit a variety of approaches to solution, ranging from below grade-level mathematics all the way up to grade-level mathematics (or beyond!). The varied responses give teachers an ideal opportunity to link multiple representations as they strategically lead students through discussion to an understanding of the grade-level mathematics. "Teacher tune-ups" provided with each problem focus teachers' attention on the grade-level mathematics and on the variety of thinking they are likely to encounter among students.

All materials and teacher supports freely available! serpinstitute.org/poster-problems

Domain	6th Grade	7th Grade
Ratios and Proportional Relationships	The Intensity of Chocolate Milk	Drag Racer Dragonfly
The Number System	No Matter How You Slice It	Seeing Sums Walking the Line
Expressions and Equations	Rating Rate Plans Toothpick Patterns	On the Download
Geometry	Knowing Nets	Triangles to Order
Statistics and Probability	Roving Ranges	Try, Try Again

Project funding was provided by the William and Flora Hewlett Foundation. Foundational work for this project by the SERP-SFUSD partnership was funded by the SD Bechtel Jr. Foundation.
