Chunking long words Part 1

As you read more, you see more long words. You can look for syllable chunks in a long word and then read the word one syllable at a time.

Here's an example: sudden

Immigrating to a new country can cause **sudden** changes in the way a person is expected to behave.

In the middle of this word you see: dd

Draw a line between the double consonants: sud den

You see two chunks: sud + den

Notice that each chunk has one vowel: sud + den

We call the two chunks syllables.

1. Read just the first chunk of the word: sud den

2. Read just the end chunk: sud den

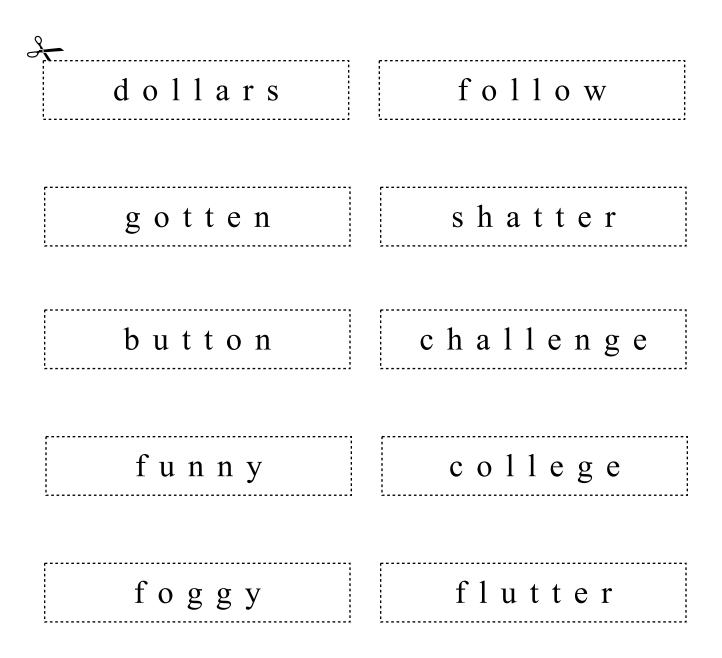

3. Blend the two chunks back together: $\mathbf{sud} + \mathbf{den}$

Underline double consonants in the words below. Then draw lines between the double consonants.

peppers jagged flutter

Try reading the words now, one syllable chunk at a time. Then blend the syllables together so they sound smooth.

- 1. Cut out the words below.
- 2. Cut up the words between the double consonants—this creates syllables.
- 3. Mix up the syllables.
- 4. Then try and put the words back together. Try reading the words, one syllable chunk at a time. Then blend the syllables together so they sound smooth.

Lesson 18 p. 97
